Vehicles:	350	Locations:	Regional Office – San Francisco
Annual Call Volume:	Over 260,000	Operations Director:	Bill Walter

SERVICES DELIVERED

LogistiCare began operating in California in 1998, under an agreement with Foundation Health Federal Services (FHFS) to manage medical transportation for its federal TRICARE program members. The company quickly established a West Coast office to support FHFS and for developing a comprehensive network of transportation providers throughout the state.

LogistiCare added new clients and services in the California market in 1999. Mercy Health Care Health System and HealthNet of California both tapped LogistiCare to manage their complex medical transportation programs. As an integrated healthcare delivery system, Mercy required coordination of all medical transportation services for its capitated members and patients. Included are emergency and non-emergency medical transportation, ambulatory services including wheelchair and taxi services, and specialty care services involving specialized cardiac and intensive pediatric care team transports.

LogistiCare continues to advance its presence in the California market with a growing list of clients that includes HMOs, Medical Groups and organized hospital systems. In fact, recently signed an agreement to coordinate transportation to medical appointments for more than 65,000 Medicare Advantage members enrolled with SCAN Health Plan in five Southern California counties.
