SERVICES DELIVERED

South Carolina adopted a capitated, regional brokerage model for its NET program in 2006 and awarded LogistiCare four of its six regions, covering nearly 80% of the state's NET-eligible population. LogistiCare initiated service in South Carolina in May 2007 and created a new call center in Marion County that provides needed jobs in a rural area of the state. In addition, LogistiCare created local offices in each of its other three regions to provide hands-on vendor management, facility outreach, and customer support services. LogistiCare's transportation provider network is built around the rural transit agencies that previously provided NET services in each region, supplemented by additional new commercial and non-profit providers. LogistiCare is proud to bring inter-county program coordination, budget predictability, enhanced access, more detailed performance reporting, and other quality-related innovations to the SC NET program.
